```java
package chapter07.exercise;

public class StudentTest {
    public static void main(String[] args) {
        Human man = new Human("Steve", 30);
        System.out.println(man);

        Student student = new Student("Parker", 23,
  "Physics");
        System.out.println(student);

        student.setName("Peter");
        student.setAge(19);
        student.setMajor("Computer Science");

        System.out.print("이름: " + student.getName() + ", ");
        System.out.print("나이: " + student.getAge() + ", " );
        System.out.print("전공: " + student.getMajor());
    }
}
```
